

Basisbank chose Keepit to add an extra layer of security for their Office 365 data and comply with FSA legal regulatory requirements.

#### Taking control of data security

Basisbank currently has two mail systems and plans to migrate completely to the Office 365 cloud solution. It is crucial that Basisbank relies on a stable and independent Office 365 backup solution in a secondary location as soon as the two mailing systems and thus the implicit extra data copy are terminated.

*Our biggest challenge with Office 365 is that it is a cloud-based Microsoft solution that is out of our control. When we decide to move all mailboxes to Office 365, we cannot live with the fact that our Office 365 data makes us 100% dependent on Microsoft. We need an independent backup solution such as Keepit to secure our Office 365 data and allow for quick restore.*

Flemming Selchau  
IT Manager

Selchau sees a much simpler set-up with Microsoft Office 365 cloud solution and Keepit's automatic cloud backup at a secondary location. Keepit's primary function is to ensure that Basisbank will not compromise the data security, although both solutions are located in the cloud.

*Our biggest challenge with Office 365 is that is out of our control. We need an independent backup solution such as Keepit to secure our Office 365 data and allow for quick restore.*

#### Meeting regulatory requirements

As a financial company, Basisbank is subject to a number of legal obligations and specific regulatory requirements regarding outsourcing, which must be respected when embracing a cloud-based solution like Office 365. Microsoft's backup options were not sufficient, neither in terms of the legal requirements, nor Basisbank's internal requirements. By implementing Keepit as a secondary independent backup solution, Basisbank fulfills the requirement of providing full data security for Office 365.

#### Keepit as a functional tool

Besides ensuring automatic backup of the company's Office 365 data, Basisbank's chosen solution also had to offer a quick search and restore process. Selchau wanted Keepit to fill in the missing functionality that he experienced with Office 365, serving as a daily tool ensuring a simple and efficient workflow for employees.

*We wanted to be able to use the extra backup application for something more in our daily work. For example, Keepit allows us to easily find and restore a lost email. Rather than spending 14 days working on this, Keepit ensures a much more efficient operation.*

Flemming Selchau

#### An accessible and affordable solution

The price of the solution has been an important parameter in choosing a backup supplier.

*Office 365 is a relatively affordable solution, and a third-party backup solution should measure up to this. The balance between price and performance has to be right. And I think Keepit has got that just right.*

Flemming Selchau

#### The right solution for Basisbank

Basisbank acknowledged that an independent backup for Office 365 was a necessity to maintain a high level of security. Rather than rely on one supplier, Keepit adds an extra layer of security for Basisbank's Office 365 data, whilst ensuring legal regulatory requirements.

Established in 2000, Basisbank is Denmark's first fully online bank – and one of the first in the world without any physical branches. With headquarters in Teglholmen, Copenhagen, Basisbank offers loans and savings products to private customers and is located on about 30,000 mobiles, tablets and computers.
