

"With Keepit we have found a backup solution that secures all of our employees' data, whether they are stored on their workstation or in Office 365."

Michael Wax Due, IT manager at Konventum

At Konventum, all employees and teachers use Office 365. Konventum has applied Keepit backup to endpoints like desktops as well as Office 365.

Keepit Backup Solution Adaptable to User Needs

Konventum's IT manager, Michael Wax Due, had already used Keepit to secure backup of Konventum endpoints, when he decided to expand the cooperation with Keepit to include cloud backup for Office 365.

Konventum is using Office 365 for email, contacts and calendar. It was therefore an advantage that Keepit's

solution could be adapted to these exact needs, as Konventum did not need backup of the full Office 365 suite.

Keepit's adaptability gives Wax Due the opportunity to customize his backup solution for the needs that Konventum has now and going forward. This is indeed a flexible and economically beneficial solution for Konventum.

Independent Backup Outside of Microsoft's Data Center

Rather than being completely dependent on Microsoft as the only supplier of Office 365-related data solutions, Wax Due went for the best possible data security. He decided to ensure Konventum's Office 365 data with an independent backup.

"With Keepit, we now have independent backup at a secondary location in the cloud, from where I can always restore data. It gives me reassurance and security," Wax Due explains.

Automatic Backup of Endpoints

A central IT policy at Konventum requires all files to be stored on network drives. However, this policy can be hard for Wax Due to enforce, because whenever employees work outside Konventum, their work is typically stored locally on their own device. Wax Due experienced several times a malfunctioning PC or hard drive resulting in an irrevocable loss of the employee's work. That's why one of the most important criteria for Konventum was that the backup solution could also secure the users' local PC. And when Wax Due investigated the market for backup, Keepit was the only solution that met this in a simple and affordable way.

Conference Center

The Challenge:

IT manager Michael Wax Due needed to ensure the Office 365 data with a backup solution to a secondary location. The solution should also provide automatic backup of endpoints.

Konventum chose Keepit because:

- Keepit ensures automatic backup of Office 365 as well as the users' local devices
- The backup solution could be adapted to the exact needs now and in the future
- Keepit provides unlimited retention

Keepit - Perfect for Sharing Documents

Over time, Konventum discovered that with Keepit follows a number of great features, in addition to traditional backup. One of the features Wax Due highlights is the possibility of using Keepit as a sharing service. Konventum is now using Keepit as an alternative to One-Drive and Dropbox, that the teachers used previously.

"Our experience is that with Keepit the teachers can easily share materials in the cloud. Compared to the usual sharing services, Keepit allows them plenty of storage space to share materials. At the same time it enables me as IT manager to have central control, which I did not have with the personal sharing services that employees used before," Wax Due explains.

"It has become much easier for our teachers to share materials with students: 3 clicks and the material is in the cloud and can be downloaded by students. It really is a function that the teachers appreciate," Wax Due stresses.

Unlimited Retention an Appreciated Feature

Wax Due is happy that Keepit allows for the archiving of data as long as it may be required.

The unlimited retention period is just one of the features that distinguishes Keepit's solution from what Office 365 customers are offered by Microsoft. If, for example, a user accidentally deletes an important e-mail or file and realizes this too late, there are no restore options offered by Microsoft in Office 365.

Keepit is Easy to Setup and Use

Konventum's experience is that Keepit has been very easy to install and get started with. As soon as Wax Due had configured Keepit, the daily backup was running automatically. According to Wax Due, users have found it easy to get started using Keepit.

"It is really nice that the solution is so easy and accessible for our users. Not all our employees are IT-savvy, so for them it is important that the solutions we provide are easy to use. And Keepit is," he stresses.

The Right Solution for Konventum

At Konventum, IT manager Michael Wax Due feels reassured that Keepit has secured backup on a secondary

location of the Office 365 data as well as data stored on local devices. Keepit allows Wax Due to restore any data at any time, including data from the past - a security that Microsoft could not give him.

Wax Due's decision to choose a single backup supplier to cover Konventum's backup needs goes hand-in-hand with Keepit's vision of securing the digital company.

At Konventum, the teachers praise Keepit's ease-of-use and the fact that they can easily share even large documents with each other internally and externally. At the same time, Keepit's sharing feature gives Wax Due central control of the data shared in the cloud.
